

OBS Webclient Redesign

Andreas Bauer, Robert Lihm

SUSE Linux Products GmbH - Build Service Team

23th February 2008

OBS Webclient Redesign

- 1 Current design
- 2 Webdesign Basics
- 3 Planned Changes
- 4 Participate

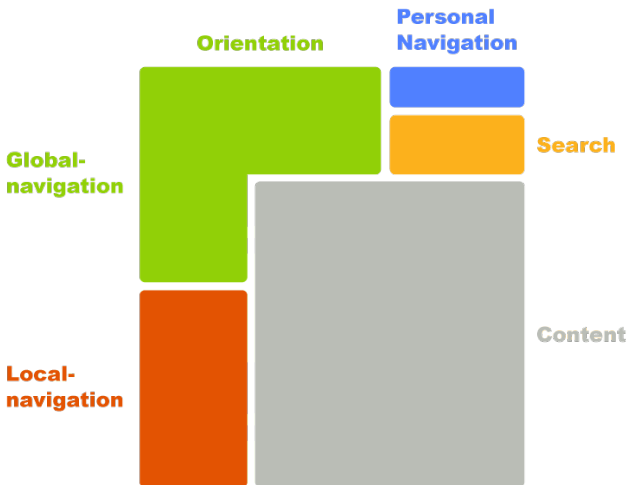

Problems of the current "design"

- Based on the underlying data model
- Grown with development
- No consistent navigation between pages

Structure: Wireframe

Structure: Spatial Memory

The screenshot displays the openSUSE.org website with a clear layout. At the top left is the openSUSE logo. A green navigation bar contains the text "Discover it". To the right, a blue bar includes user links: "Rihm | My tab | Preferences | My wishlist | My contributions | Log out". Below this is a search bar with "Go" and "Search" buttons. The main content area features a "Welcome to openSUSE.org" header, followed by a paragraph about the project's mission. A "Getting openSUSE" section lists download versions (openSUSE 10.3 and 11.0 Alpha 2) and provides links for instructions and repositories. A "FOSDEM 2008" section announces an event in Brussels. A "Participate in openSUSE" section offers ways for developers and end users to get involved. The right sidebar contains "News & Events" with a list of recent news items and a "Project Milestones" section with dates for various releases. At the bottom right, a "Sponsored by" section features the AMD logo. The left sidebar contains a "Discover it" menu with links to Project Overview, How to Participate, Documentation, Support, Support Database, Contact, and Sitemap, as well as a "Toolbox" with links to What links here, Related changes, Recent changes, Upload file, and Special pages.

Color Code

Wiki [<https://en.opensuse.org>]

Keywords: hope, rests, nature

Software [<https://software.opensuse.org>]

Keywords: fun, energy, action, warm, connectivity

Build Service [<https://build.opensuse.org>]

Keywords: neutral, sober, industrial

User Directory [<https://users.opensuse.org/>]

Keywords: trust, serious, harmony

Planned Changes

- Make the client a starting point for learning packagers
- Easier way to see the status of packages
- Don't show actions which can't be executed due to lacking permissions
- Guessing the projects/packages a certain user wants to work on
- Make certain actions on projects available when editing a package
- When possible, use inplace editing instead of linking to a dedicated edit page
